

Thea Lite is a visualization application for viewing and sharing synthetic environments. Ideal for spatial analysis, intelligence gathering, planning, and information analysis, Thea Lite is a GUI-based synthetic database viewer that makes the visualization of Open Flight, Terrapage, and CDB accessible through an intuitive optimized interface.

Thea Lite is based on Vega Prime and leverages the most deployed COTS scene graph framework to offer a simple way to present and visualize geospatial data. All the basic viewer capabilities, including essential content enhancement as well as navigation and environmental parameter manipulation, are available without licensing or distribution restrictions.

PLEASE NOTE: Thea Lite is a no cost tool provided by Presagis to allow for the visualization of supported database formats. As a free tool, the comprehensive product support offered for other Presagis products is not available for Thea Lite. Please access the Thea Lite Forum for online information and chat about the viewer and its use.
