# HUMAN ANTHROPOMETRY CATALOG 2 (HTC)

# CATIA V5R18

Product Synthesis

## Human Anthropometry Catalog

Boosts productivity by providing users with a catalog of manikins based on anthropometry data.

### Product overview

Human Anthropometry Catalog 2 (HTC) provides users with a set of manikins based on anthropometry database to accommodate and optimize products for different population segments.

### Product Highlights

- ☒ Enhance analyses results precision by providing catalogs with advanced anthropometry attributes
- ☒ Promotes human ergonomics simulation to more users through an improved user experience

### Product Key Customers Benefits

#### Enhance analyses results precision

Based on scientific literature, Human Anthropometry Catalog 2 (HTC) provides users with a set of manikins based on anthropometry databases with different population size. It enables to optimize and validate products against different population segments for an increased market acceptance.

#### Better User Experience

Catalogs greatly improve the usage of digital manikins and enable also to promote human modeling to more users.

## ABOUT CATIA V5R18

CATIA is Dassault Systemes' PLM solution for digital product definition and simulation.
