TRANSCAT
A DASSAULT SYSTEMES COMPANY

myV5 - MANAGING DESIGN ENVIRONMENTS

JUST GOT A LITTLE EASIER

Within a company, many departments use their own design schemes and processes to meet project or customer requirements. Therefore users or user groups require specific CATIA environments – with differing releases, service packs, hotfixes and add-on products. Users have to launch the correct releases of CATIA and to sort through multiple settings and workbenches. This procedure costs valuable time and increases errors, such as choosing wrong releases. Now this process can be streamlined with a cost effective solution that requires a minimal installation and training time.

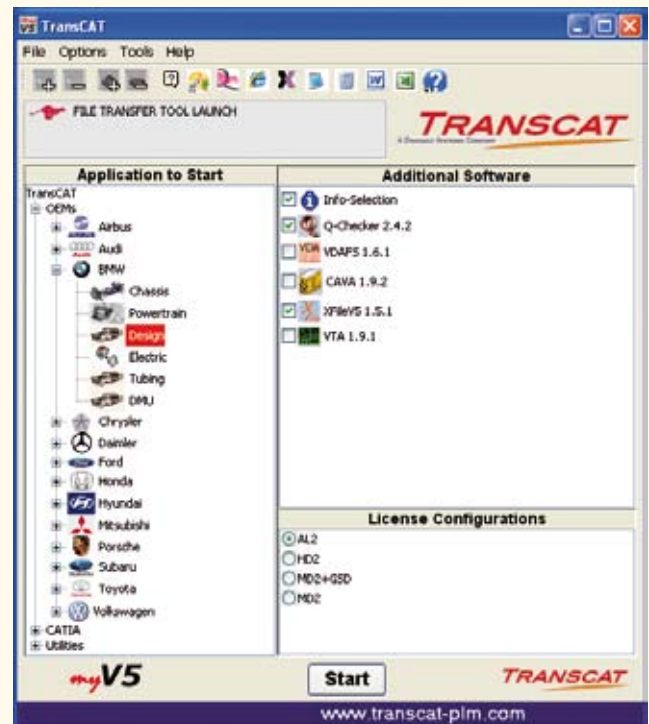

Launch CATIA – the easy way

With myV5 launching the right CATIA environment is just a few simple clicks. By choosing a customer or project from the structured menu, the relevant applications can be started automatically, ensuring to work in the right and process compliant environment.

More Time For Engineering

myV5 empowers CATIA V5 and mixed CAD (V4, other CAD) customers to manage complex CATIA V5 environments, improve design production, and remain current on OEM configurations. This well-organized and flexible solution helps users to work within different operating systems, launch the correct release of CATIA, select license configurations, and load add-on software with a straightforward approach.

Process Compliance

User or user groups can be administrated just to start specific CATIA releases, environments and PDM system releases to make sure the engineering data design is compliant with company standards or OEM requirements.

myV5

- accelerates and simplifies CATIA-Start for END-USERS
- reduces CAD roll-out and update time tremendously for ADMINISTRATORS

IT CONCEPT FOR ROLLOUT AND UPDATE

After rolling out or updating CATIA software, the configuration of different permissions for users, user groups and computers is handled with ease. By using myV5, all permissions and environments are set up globally in one XML configuration file. Additional user specific customization is not required.

... A POWERFUL COMPONENT OF AN IT CONCEPT TO
MANAGE THE ENGINEERING DESIGN SYSTEMS FAST AND
CONTROLLED.

One single configuration for multiple purposes

myV5 stores all relevant user and application information in one XML-File which is maintained centrally:

- for multiple environment strategies
- for multiple platforms (Win / Unix)
- for multiple users / user groups
- for different software installations

Highlights

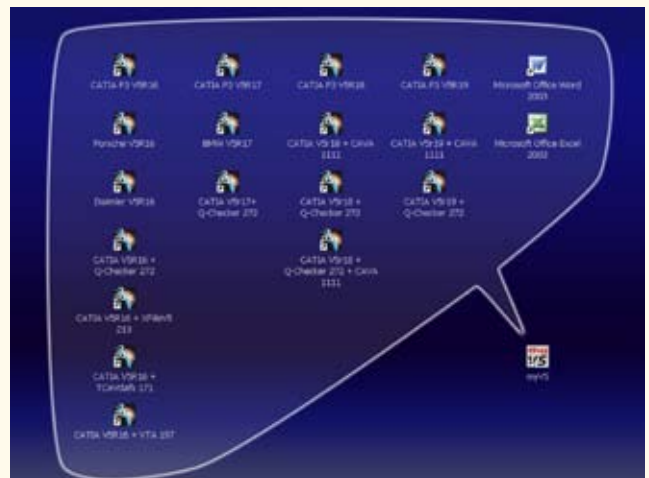

- Minimal effort to roll out and update CATIA software and environments
- Pre-configured OEM environments help suppliers to easily keep their system up to date
- Flexible combination of CATIA V5 with add-ons and required license configurations in an assembled environment
- Fulfill process compliance by ensuring standard environments including configurations, licenses and settings to all users
- Intuitive GUI for users to start CATIA in the right environment

Update Service for the Environment of the

Car Makers

Transcat offers an IT service for suppliers of the automotive industry to keep their CATIA environments continuously in synch with their customers. An update package is delivered to suppliers as DVD or made available via download and includes:

- OEM environments with settings, macros and other OEM-specific information
- Service packs and hot fixes for CATIA V5
- Pre-configured installation-routines to simplify the task of keeping the supplier environments up-to-date

Consolidate your start environments

Benefits for Administrators

- Entire Configuration in one XML-File for all platforms
- Simple configuration of users: Rights / Licenses / Environments / User groups / Development partners
- Unicode-enabled for special character sets like Japanese, Korean and Chinese
- News ticker with configurable messages
- Consistent support for worldwide deployment of design environment

TRANSCAT SOFTWARE

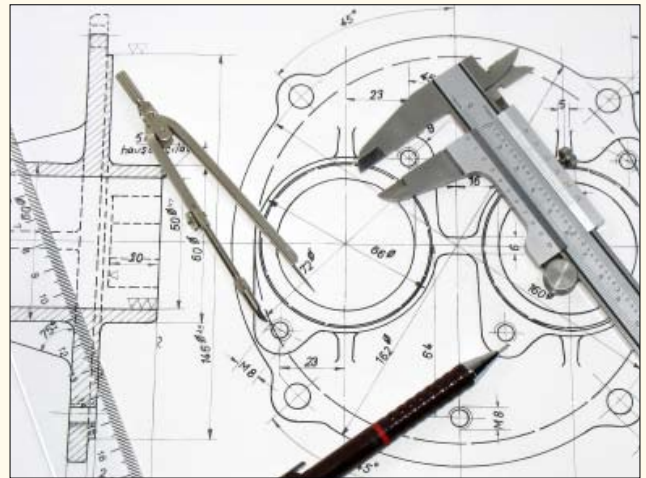

More time for engineering

Founded in 1987, Transcat PLM GmbH is a fully-owned subsidiary of Dassault Systèmes. From the very beginning, Transcat PLM has been a solution provider specializing in Dassault Systèmes portfolio and developing add-on software to enhance the productivity of their customers. Transcat PLM's software solutions support the design process with CATIA, DELMIA and ENOVIA. Companies around the World optimize their design processes with products from Transcat PLM. Q-Checker, CAVA, myV5, VDAFS Processor and XFileV5 are helping users in the context of a global development process.

Benefits for CAD-Users

- Choosing a CATIA-Release and add-ons with a few clicks
- A structured tree gives a friendly and clear layout to select applications easily
- Avoiding to browse through many settings
- Selecting environments (Body CAD, Powertrain etc.) with all necessary applications preconfigured
- Targeted selection of the required license
- Process compliant model creation through always up-to-date environments
