DI-Guy Assists MCTOG to Prepare Marines for Afghanistan Deployment

*DI-Guy provides Enhanced Company Operations (ECO)
simulation system in support of Spartan Resolve
exercises*

Waltham, MA., October 21, 2010 – DI-Guy, the world’s leading supplier of software for real-time human simulation, is developing an Enhanced Company Operations (ECO) simulation system to support the Marine Corps Tactics and Operations Group (MCTOG) in execution of “Spartan Resolve”, their pre-deployment exercise. DI-Guy ECO Sim is an integrated set of training stations that focuses on counterinsurgency and IED defeat tactics. The ECO Sim system supports interactions at all levels, enabling Marines to command and control a company, platoons, squads, and individuals in distributed simulations involving hundreds of Marines, insurgent fighters, and Afghani civilians.

The Spartan Resolve exercise trains Marine battalion and regimental staffs preparing for deployment to Afghanistan. Marines learn how to employ Marine Air-Ground Task Force (MAGTF) assets in a realistic operational environment. DI-Guy engineers worked closely with Marine Corps training personnel to fine tune ECO Sim to validate the system and maximize training value.

The centerpiece of the DI-Guy ECO Sim system is the Small Unit Leader Interface (SULI) workstation, which visualizes the battlefield terrain, vehicles, and combatants. Marine units being trained provide personnel to operate the SULI in order to provide trainees with realistic training situations. Each virtual Marine acts autonomously while navigating the terrain, following orders, joining formations and responding intelligently to asynchronous events such as firefights. DI-Guy AI provides the critical “pattern of life” activity to simulate the real world challenges faced in combating insurgencies embedded within the general populace.

“DI-Guy is proud to support MCTOG as they ready unit commanders for their important mission in Afghanistan. It is gratifying to know that DI-Guy’s expertise and technology is playing a key role in our nation’s defense.”

~ Marc Raibert, President DI-Guy

DI-Guy’s commercial product offerings include:

- DI-Guy SDK – Software library of human characters, motions and high-level behaviors,
- DI-Guy Scenario – 3D visual application for easily creating human-based scenarios,
- DI-Guy AI – Human AI focused on quickly generating hundreds or thousands of autonomous, terrain-aware human characters.
